Amended Specification

Amend page 5, paragraph beginning at line 16 as follows

:

At any time after either the customer or recipients input the wrap codes and their data into the control system they can access the stored information from the computer database. This is accomplished by their inputting via the website at steps 50, 52 and 54 requests into a tracking subsystem 56 of the computer for the track history of the particular wrap which they have gifted or received. In doing so they would input the user's I. D. code, and the control system then processes the request and interactively transmits the associated data back for display on the website where it is displayed to the user. The display could comprise a geographic map, such as that of the United States, upon which the wrap's geographic travel history is depicted. At step 58 the control system accesses data and displays the data on the website.
